

SENECIO ANGEL WINGS

FLAMINGO

Holland Inc.

- // Great as a stand-alone or in combos
- // Silver velvet foliage
- // Drought tolerant

**WHERE PASSION
COMES TO BLOOM**

Transplanting

Remove liner carefully from trays so as not to damage roots.

Plant liner slightly above soil line being mindful to not bury crown.

Keep soil surface of liner level with surface of finished pot.

Container Sizes and Crop Times

- Quart/4" from 72-cell liner: 1ppp. 10-12 weeks after transplant.
- Gallon/6" from 72-cell liner: 1ppp. 16-18 weeks after transplant.

Growing Media

Plant into a well-drained media with a pH: 5.7-5.9.

Temperature

Night temperature 55-58°F (13-14°C).

Day temperature 60-65°F (16-18°C). Plants can be grown slightly warmer to speed growth.

Vernalization is not required. Once desired size is reached plants can be maintained at 55-58°F (13-14°C)

Light

Is not necessary in most conditions.

Water and Feed

Senecio should be grown using a well balanced fertilizer at a rate of 125-175ppm.

The media should be well drained and moist but allowed to dry slightly between waterings.

Growth Regulators

PGR application will not be necessary.

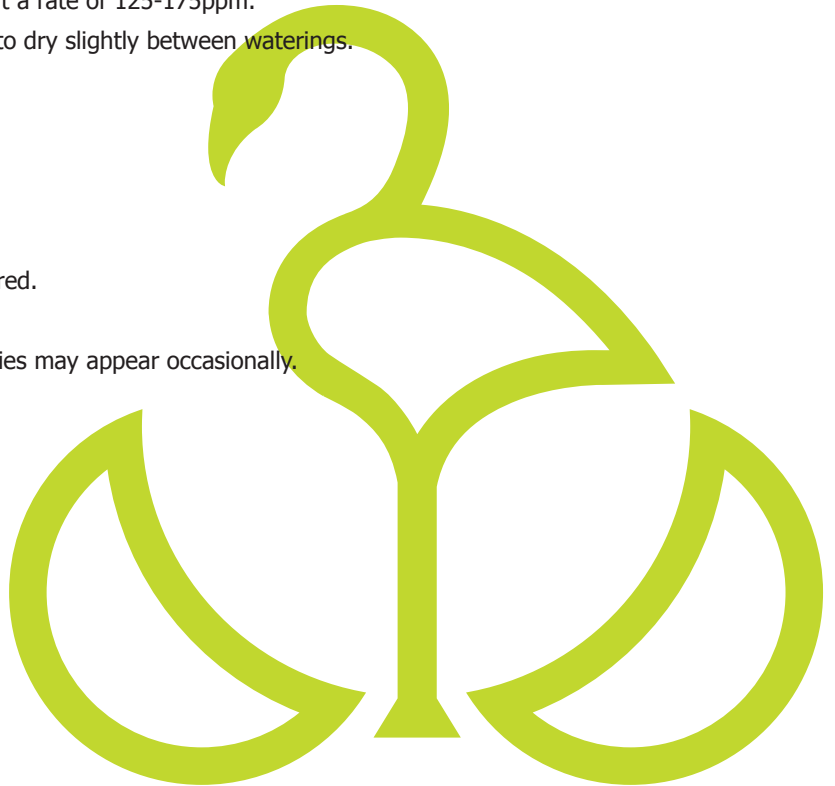

Insects and Diseases

Pythium and Rhizoctonia can occur if plants are overwatered.

Senecio can generally be grown free of insects.

Aphids, mealybugs, slugs, spider mites, thrips and whiteflies may appear occasionally.

Preventive measures are typically not necessary.

Flamingo Holland cannot be liable for any loss of profit, growing result, or any other commercial damages resulting from the use of this guide. This guide is for information purposes only and are not warranted for content, accuracy, or performance overall.
